

Pharmacy Technician factsheet

What is a pharmacy technician?

A pharmacy technician is a senior member of the pharmacy team. They work on the front line of health care supporting patients in a range of community settings.

Alongside pharmacists, they work to ensure patients get their medicines safely and effectively and understand how to take their medication.

What does a pharmacy technicians do?

Pharmacy technicians are often the first point of contact for patients. They play an essential role in:

- Providing healthcare guidance and information to patients
- Taking in prescriptions, preparing and dispensing medicines
- Supporting patients to access health service
- Managing medicine stock, including ordering medicines
- Delivering public health advice
- Supervising other pharmacy staff / training and development

How do I become a pharmacy technician?

Pharmacy technicians working in England, Scotland and Wales must register with the General Pharmaceutical Council (GPhC). There are a number of steps you must take before you can register with the GPhC as a technician:

- Training to become a pharmacy technician takes two years. The training programme combines practical work and study and you must work under the guidance of a pharmacist or pharmacy technician.
- During this time, you will need to be enrolled on a course accredited or recognised by the GPhC.
- Finally, you must meet the fitness to practice requirement for registration. This means you have the skills, knowledge, character, and health necessary to do your job safely.

Visit the [GPhC website](#) to find accredited or recognised courses.

What are the entry requirements to becoming a pharmacy technician?

The entry requirements vary, but as a general rule you will need four GCSEs at Grade 4 and above (or equivalent), including mathematics, English language and two sciences.

Five great reasons to train as pharmacy technician!

1. I want to help people to get well.
2. I want to work directly with patients.
